

9th Meeting of the Standing Committee
19th Meeting of the Advisory Committee

Heraklion, Greece, 7 – 10 April 2014

Report of the Intersessional Working Group
on Autecological Studies for Priority Species

Convenor: Stéphane Aulagnier

In late December the Secretariat circulated the letter below.

During the meeting of the last Meeting of the Advisory Committee held in Sofia the members of the EUROBATS working group on autecological studies on priority species shortened the list of species that could be the priority species for the next years.

I kindly request your help to fill up the four columns of the attached table by evaluating the present knowledge (through bibliography) on these four components of the life cycle of bats as follows (for the whole list or only for species that you can evaluate):

0: no information

1: poor knowledge

2: good knowledge

I would be grateful to receive your answers by the end of February in order to prepare a synthesis that we shall discuss in Crete.

You will read this synthesis at the back for a final discussion during the meeting before an expected draft resolution for the next MoP.
