

EUROBATS

EUROBATS National Implementation Report MoP9

This questionnaire reflects obligations of the Parties listed in Resolution 8.11 Implementation of the Conservation and Management Plan (2019 - 2022) and other effective Resolutions.

In case of technical issues and questions, please use a support center button in the bottom before contacting the Secretariat.

A. General Information

Name of your country

>>> Poland

Period covered by this report

>>> 2018-2022

Is your country a party to EUROBATS Agreement?

Yes

Competent authority

Title, address, phone, fax, e-mail and other contact details

>>> Ministry of Climate and Environment

Department of Nature Protection

Personal details of administrative focal point (s)

>>> Monika Lesz

Councillor

Department of Nature Protection

monika.lesz@srodowisko.gov.pl

tel + 48 22 3692667

Please give details of designated scientific focal points

>>> dr. Janusz Hejduk

General Directorate of State Forests,

Chief Veterinary Inspectorate.

Bats species which occur in the territory

Please select only species which were recorded from your country

Species: *Rousettus aegyptiacus* (Geoffroy, 1810)

Status of the species within the territory

Status of occurrence

Please give details if the species is not resident. E.g. year of extinction, description of occasional findings etc. Text boxes are expandable.

Other

Species: *Rhinolophus ferrumequinum* (Schreber, 1774)

Status of the species within the territory

Status of occurrence

Please give details if the species is not resident. E.g. year of extinction, description of occasional findings etc. Text boxes are expandable.

Resident: hibernation

Occasional

Conservational status

Overall national trend

Indeterminate

Status in the National Red List

Please indicate status of the species in the national red data list or similar document

>>> LC

Year of the Red List assesment

>>> 2001

Natura2000 or Emerald reports

Has the national status reported under the Article 17 of the Habitat Directive(2019) or for the Emerald network (non-EU countries) changed since the previous assessment?

Yes

Species: Rhinolophus hipposideros (Borkhausen, 1797)

Status of the species within the territory

Status of occurrence

Please give details if the species is not resident. E.g. year of extinction, description of occasional findings etc. Text boxes are expandable.

Resident: breeding

Resident: hibernation

Conservational status

Overall national trend

Stable

Status in the National Red List

Please indicate status of the species in the national red data list or similar document

1. Legal Requirements

Resolution 4.6. Guidelines for the issue of permits for the capture and study of captured wild bats

Does the system of permits or licenses for the capture of bats exist in your country?

Yes

System of permits or licences for the keeping of bats for educational or animal welfare purposes

In place

System of permits or licences for sampling, ringing, killing of bats for scientific study

Exists

Comments

>>> No

Resolution 6.5. Guidelines on ethics for research and field work practices

Other activities carried out under this resolution (optional)

>>> The permit issued by nature protection authorities specifies detailed requirements to be met when performing individual activities. The mandate should take into account animal welfare and ethical principles.

What's new is the code of ethics of Polish photographers, which also includes bats

<https://www.szerokikadr.pl/wydarzenia/zwiazek-polskich-fotografow-przyrody-wprowadzil-do-swojego-kodeksu-etycznego-nowe-rozporzadzenia>

Ethical principles are also published and promoted by the National Society for the Protection of Bats

Please, give details of the legislation which is protecting bats

>>> The Act of 16 April 2004 on nature conservation (Journal of Laws of 2015 No 92 item 880)

https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=&ved=2ahUKEwic_ICHm6_4AhURxosKHfAqAYoQFnoECA0QAQ&url=https%3A%2F%2Fisap.sejm.gov.pl%2Fisap.nsf%2Fdownload.xsp%2FWDU20040920880%2FU%2FD20040880Lj.pdf&usg=AOvVaw2tb1wU4JqnE_ooZVwxK0WQ

Which species are not protected and why?

>>> All are protected.

2. Population survey and monitoring

Resolution 2.2. Consistent monitoring methodologies

Implementation of EUROBATS guidelines published in EUROBATS Publication n°5 to ensure consistency and information exchange between Parties and Range States

Yes

Please give details

>>> Our membership in EUROBATS

Resolution 5.4. Monitoring bats across Europe

Involvement in a long-term pan-European surveillance to provide trend data

No

Awareness-raising of the importance of underground sites

Yes

Collaboration and information exchange with other Parties and range states on surveillance and monitoring activities

Yes

Please provide details

>>> The results of the monitoring are published and made available to the public and transferred to the European Environment Agency and the European Commission. Results of bats monitoring carried out at the request of the Chief Inspectorate of Environmental Protection as part of the State Environmental Monitoring, are published on the Inspectorate's website <http://siedliska.gios.gov.pl/> and in the synthetic form in the Environmental Monitoring Bulletin published also on the Inspectorate's website.

Monitoring bats in accordance with EUROBATS Publication n°5

Yes

Capacity building of bat workers and surveyors to support the undertaking of bat surveillance projects

Exists

Other activities under Resolution 5.4.

>>> There is a survey "The role of autumnal swarming behaviour and ambient air temperature in the variation of body mass in temperate bat species" Maurycy Ingaczak, Tomasz Postawa, Grzegorz Lesiński, Iwona Gottfried. <http://www.italian-journal-of-mammalogy.it>
Volume 30 (1): 65-73, 2019

Resolution 6.13. Bats as indicators for biodiversity

Does your country support a development of national, regional and pan-European biodiversity indicators for appropriate target audiences, using bat data

Yes

Please provide details

>>> Comprehensive monitoring of the bison population and habitat as part of the Comprehensive project for the protection of the bison by the State Forests, this research project investigated the occurrence of bats at the newly created waterholes for bison. inventory of the Białowieża Primeval Forest. For almost two years, research was conducted in the Białowieża Primeval Forest to demonstrate its current condition, and then to enable monitoring of changes taking place in it.

Research was also carried out in the field of bats.

In 2022, the Chief Inspectorate for Environmental Protection made available an IT tool integrated with the Species and Natural Habitats Monitoring database (State Environmental Monitoring), where the authorities responsible for nature protection have permanent access to the monitoring results of bats and other natural species and habitats (raw data).

Other activities carried out under this resolution (optional)

>>> "A comprehensive project for the protection of species and natural habitats in areas managed by the State Forests National Forest Holding".

Activities related to the protection of bats are carried out in 7 forest districts within 10 Natura 2000 sites. The subject of protection are such species as the lesser horseshoe bat, the western barbeque, the black bat, the greater nocturnal and all the others that will want to take advantage of from shelters in forest districts.

The activities related to the protection of bats in the project focus mainly on the protection and provision of wintering grounds. First of all, the entrances to the tunnels and cave openings are secured by installing grates, doors and the like. Places that are shelters are cleared of rubble, leaves, soil or rubbish, fortifications are maintained to protect the underground corridor from collapsing. In addition, in forests, in stands poor in hollows, the number of shelters is increased by hanging specially constructed boxes for bats. An interesting solution was applied in the Bystrzyca Kłodzka Forest District. As part of the project, crevice boxes were hung - designed to protect the western barnacle. The atypical structure of these boxes is related to the biology of barnacles, which for their summer shelters primarily choose natural tree trunks, patches of protruding bark of dying trees or crevices formed in the fork of the trunks. The design of the box imitates the cracks in the tree trunk to best recreate the conditions preferred by this species.

Resolution 7.10. Bat Rescue and Rehabilitation

Animal rescue and rehabilitation systems are effective in the country

Yes

Collaboration between bat rehabilitators and scientists

Exists

Provide examples of collaboration

>>> In response to the demand from rehabilitation centers, the GDOŚ website published guidelines on bat rescue and rehabilitation. These are official guidelines that apply not only to bats, but to all animals in need. Unfortunately, it is only in Polish.

Bat rehabilitators submit their data to a national database

Yes

Please provide information about this database

>>> Each center is required to produce an annual report on its activities. Aggregated reports of all centers are presented to the minister for the environment. This collective report is not published anywhere.

Other activities carried out under Resolution 7.10 (optional)

Resolution 8.4 Wind Turbines and Bat Populations

Raising awareness on the impact of turbines on bats and the existence of some unsuitable habitats or sites for construction

Yes

If yes, how?

>>> These issues are discussed at meetings, conferences and seminars.

Are impact assessment procedures and post-construction monitoring undertaken by appropriately experienced experts?

Yes

Please, give details

>>> It's done only on the case-to case basis. There is usually a mandate for such research in the case of wind farms but there is no such obligation settled in law. The decision on the conditions and obligations always rests with the authority that issues the permit.

National guidelines have been developed following Eurobats Pub. No. 6

Yes

Please, attach a file or or provide a link

>>>

https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=&ved=2ahUKEwjH8JSPs6_4AhXxkIsKHcGXAYlQFnoECAkQAQ&url=https%3A%2F%2Fochronaprzyrody.gdos.gov.pl%2Ffiles%2Fartykuly%2F5471%2FFarmy%2520wiatrowe%2520-%2520zalecenia_icon.pdf&usq=AOvVaw0YAsoFOuUDoulrjDTxy4HA

National guidelines are implemented

No

Investigations and research for mitigating bat mortality have been undertaken

Yes

Please, list references, attach reports and articles

>>> No data

Post-construction monitoring, if possible, is undertaken by suitably experienced bat experts

If yes, give details

Yes

>>> Minimum requirements for report authors are set out in the law.

Developers of wind energy projects and responsible authorities make raw data from impact assessment and post-construction monitoring available for independent analysis.

No

Measures such as blade feathering, higher turbine cut-in wind speeds and shutting down turbines are implemented

Yes

Please, provide details

>>> No data

Other activities carried out under Resolution 7.5 (optional)

>>> No

Resolution 8.10 Recommended Experience and Skills of Experts with regard to Quality of Assessments

Compliance with Annex to Resolution 8.10

Experts/groups of experts carrying out assessment of projects, plans and programmes on populations of European bats meet the minimum standard of skills, knowledge and experience as described in the Annex to Resolution 8.10

Yes, completely or partially

If yes

Please provide details

>>> The authors must graduate from natural science studies. They have to prove the experience in this area.

3. Roosts

Resolution 4.5. Guidelines for the use of remedial timber treatment

Small projects to provide basic data to allow an assessment of the potential impact of industry on bat populations

No

Raising awareness of product users is taking place

Yes

Please provide details

>>> Guideline about remedial timber treatment friendly to bats "Określenie wpływu na nietoperze chemicznych środków ochrony drzewa stosowanych w PL".pdf

Legislation on products which have any adverse effects on bats

Doesn't exist

Comments (optional)

>>> No

Resolution 5.7. Guidelines for the protection of overground roosts, with particular reference to roosts in buildings of cultural heritage importance

List of national important overground roosts (including legal/physical protection status)

Exists

Please, give details or links

>>> The list with the most important overground and underground roosts (including legal/physical protection status) was forwarded to the Secretariat during the AC 24 meeting in Macedonia in April 2019

You have attached the following Web links/URLs to this answer.

[Poradnik Ochrony Nietoperzy](#)

National guidelines for custodians of historical buildings on the protection of bat roosts have been developed

No

Summary report on interactions between the relevant cultural and natural heritage agencies (attach a file or provide a description)

>>> The cooperation is going well because the works for the bats have the nature of renovation and renovation

works, Below is a description of a typical activity from 2019.

On October 13, 2019, we helped our pupils living in the Natura 2000 area Kiszewo PLH300037 located in the Notecka Forest near Poznań.

At the request of the Regional Directorate for Environmental Protection in Poznań, we have carried out works there that will provide better protection to the specimens of the large nock, which during their reproduction period inhabit the attic of the church in the village of Kiszewo.

For this purpose, we secured ventilation openings to the attic, thus preventing the access of predators of these mammals, including the barn owl that inhabits the belfry of the church.

We also secured the attic floors of the church against the harmful effects of bat droppings on the wooden structure of the attic.

Other activities carried out under this resolution (optional)

>>> No

Resolution 7.6. Guidelines for the protection and management of important underground habitats for bats

List of important underground sites for bats and measures of their protection (including Natura 2000, Emerald or other status) was submitted to EUROBATS

Yes

When the latest update was submitted?

>>> April 2019.

Updated counts of bats at each listed site are submitted to the Secretariat

No

Management of important underground sites for bats is in accordance with EUROBATS Publication n°2

Yes

Other relevant activities for the protection of underground habitats

>>> No

Resolution 8.5. Conservation and Management of Important Overground Sites for Bats

Most important overground roosts are identified at the national level considering the guidance on site selection developed by the Advisory Committee and using the national databases.

If yes, please give details

>>> The list with the most important aboveground and underground shelters was forwarded to the secretariat during the AC 24 meeting in Macedonia in April 2019

Resolution 8.9. Bats, Insulation and Lining Materials

Are bats included in the impact assessment of insulation programs at a strategic level?

If yes, please give details

>>> Yes.

The buildings should be monitored if they are inhabited by birds or bats before insulation works. The experts should propose the mitigation and compensation measures.

Are any actions undertaken to ensure that insulation projects comply with national legislation regarding bat protection and conservation by implementing appropriate pre-insulation survey and assessment, mitigation and compensation to avoid roost loss and bat mortality?

Please provide information concerning such actions and attach files, if required

>>> There are materials and guides on this issue on the websites of government agencies. Trainings and conferences devoted to this issue are organized

<https://www.gov.pl/web/gdos/Ochrona-ptakow-podczas-prac-termomodernizacyjnych>

Theatre is a social media group of birds and bats in buildings. The group has over 700 members

Also municipal offices prepare local regulations regarding bats, eg "Rules for the protection of bats and birds in buildings during renovation and other works" by the Faculty of Architecture of the Capital City of Warsaw.

Resolution 8.12. Purpose-built Man-made Roosts

Examples provided by the review document included as Annex 1 to Resolution 8.12 are considered whenever new roosting structures are planned or existing structures are renovated for bats

Please give details, if it is the case

>>> PTOPI Salamandra (NGO) has built a winter shelter for bats as the compensation.

Are existing purpose-built Bat Roosts monitored and further studies on their effectiveness promoted?

If yes, please give details

>>> Yes

Resolution 7.8. Conservation and management of critical feeding areas, core areas around colonies and commuting routes

Other activities carried out under this resolution (optional)

>>> In Management Plans prepared for Nature 2000 areas devoted to bats always is the need of designating the migration routes and foraging areas of the species.

Resolution 7.9. Impact of roads and other traffic infrastructures on bats

Bats are taken into account during the planning, construction and operation of roads and other infrastructure projects

Yes

Please give details or attach a file with description

>>> Bats are taken into account in the process of assessing the application and granting the permit.

Pre-construction strategic and environmental impacts assessment procedures are mandatory

Are mandatory

Post-construction monitoring

Required occasionally

Raw data from environmental impact assessment and post-construction monitoring is available for independent scientific analysis

No

Research into the impact of new and, where appropriate, existing roads and other infrastructure on bats and into the effectiveness of mitigation measures

Yes

Other activities carried out under Resolution 7.9 (optional)

>>> <https://www.gov.pl/web/gddkia/bezpieczne-bramki-dla-nietoperzy>

Resolution 8.6. Bats and Light Pollution

Is national guidance taking due account of the EUROBATS Publication Series No. 8 on Bats and Light Pollution developed and promoted? If yes, please give details or attach a file.

>>> No. There is a DarkSkyPoland website that covers bats. The Regional Directorates of Nature Conservation often ask questions about the light pollution in pre-construction impact assessments made for investments

5. Promoting Public Awareness of Bats and their Conservation and Providing Advice

Click "expand" to see the questions!

International Bat Night. Give details for each year: number of events and number of people participated

>>> Every year, chiropterological conferences are held with approximately 130 participants. The next one is planned for 16-18 September 2022 in Poznań

In addition, bat nights are celebrated every year in various regions of the country, below are a few examples:

On May 4, 2021, Wrocław festival of bats took place.

On September 2, 2019, a team of landscape parks organized the Bat Night. In cooperation with the Biodiversitatis Foundation, the website zastoperze.pl and the Faculty of Biology and Environmental Protection of the University of Lodz, two lectures were recently conducted in Załęczański Landscape Park and the Wzniesienia Łódzkie Landscape Park.

On August 19, 2018, the International Bat Night took place in Łagiewniki. The experts from our Faculty took care of the high professional level - Dr. Janusz Hejduk (Department of Biological Diversity Research, Didactics and Bioeducation) and Dr. Katarzyna Janik-Superson (Department of Molecular Biophysics).

It is worth noting that over 20 countries from all over the continent are involved in this "bat action", organized annually in Europe since the 1990s. What's more, this year our "Łódź" edition was the only officially reported event of this type in Poland.

Its organizers are the "Biodiversitatis" Foundation, our Faculty, the Complex of Landscape Parks of the Łódź Province, the Łódź Chiropterological Group and the Dzikie Życie monthly.

Employees of forest districts invited the public to participate in bat nights or walks with bats.

11. Further important activities to share with other Parties and Range States

Give details or provide links

>>> Over 800,000 PLN co-financing from Norwegian funds went to researchers and practitioners operating in the Polish Society for the Protection of Bats for the protection of the *Barbastella barbastellus*.

Barbastella barbastellus is on the Red List of Endangered and Endangered Animals in Poland with the DD category (poorly recognized status) and on the IUCN Red List as a VU.

The main goal of the project is to improve the living conditions of the *Barbastella barbastellus* artificial shelters and supplementing the knowledge on the activity of this bat.

Already in May 2022, 100 boxes for the mopka were hung in the Zielonka Forest.

Monitoring of the colonization of these boxes by bats and detector monitoring of the activity of barbels is planned. It will be an innovative way of sampling the population of a species, which will make it possible to assess changes in its dynamics.

The *Barbastella barbastellus* protection project is implemented in 12 forest areas located in various regions of the country, including: 10 Natura 2000 areas, Kampinos National Park and landscape parks: Bolimowski Landscape Park, Puszcza Zielonka Landscape Park).

100 booths will be hung in all of these places.

The project is implemented by the Polish Society for the Protection of Bats.

The project coordinator is prof. UPP. dr hab. Andrzej Węgiel.

Project co-financed by the EEA Financial Mechanism 2014-2021 under the "Environment, Energy and Climate Change" program.

As a result of the Białowieża Forest inventory - one of its results was obtaining updated information on the bats occurring in this forest.

Research work carried out in national parks was finalized from the Forest Fudusz Tatra National Park

Supplementing the knowledge about bats in the Tatra Mountains in this area during the post-hibernation period

Table Mountains National Park

Bats of the Stołowe Mountains National Park

Kraina Podkowca LIFE+ Podkowiec Towers

The project is carried out by:

Polish Society of Friends of Nature "pro Natura" with partners:

THE GENERAL DIRECTORATE OF THE STATE FORESTS,

ČESKÁ SPOLEČNOST PRO OCHRANU NETOPÝRŮ (Czech Society for the Protection of Bats),

SPOLOČNOSŤ PRE OCHRANU NETOPIEROV NA SLOVENSKU (Society for the Protection of Bats in Slovakia),

CENTRUL PENTRU CERCETAREA ȘI CONSERVAREA LILIECILOR (Research and Conservation Association Bat Center in Romania).

5-year LIFE + Podkowiec Towers project. The project is a component of many activities in Poland, Slovakia, the Czech Republic and Romania. The largest part of the project will be implemented in southern Poland.

As part of the activities, 10 towers for bats, 100 bat huts "BAT HUT" and 5 wintering places for bats "HIBERNAKULA" will be built.

Project mission:

Maintaining and improving the conservation status of endangered bat species in the region of Central and Eastern Europe.

Project goals:

Objective 1: Protection and enrichment of sites of great importance for key species of bats

Detailed objectives:

improvement of breeding and winter shelters in 18 Natura 2000 sites in 4 countries

improvement of the condition of feeding habitats in 6 Natura 2000 areas in Poland and Slovakia

limiting human-bat conflicts in 4 countries

Objective 2: Move from a reactive to a proactive approach in the protection of bats.

Detailed objectives:

providing large replacement hiding places and habitats near the 10 most endangered breeding colonies in Poland

creation of 36 new shelters and introduction of new elements to 10 habitats in Slovakia

creating optimal shelters as a supplement to existing places, most often chosen by bats, where often random factors cause deterioration of the condition and exposure of the population

Optimal shelters offer a range of microclimatic conditions and the proximity of feeding grounds, they will prepare bats for the problems caused by climate change.

Location of shelters close to food sources = optimization of the range of life beyond human settlements = protection of bats against direct human influence (disturbing, killing, transmitting diseases).

Providing the population with expansion opportunities.

Increase the persistence of the population through colony dispersion.

Objective 3: Extending institutional support in the protection of bats

Promoting positive changes in the general public's approach to bats.

Increasing awareness and knowledge among professionals who come into contact with bats.

Expanding the capacities of private individuals and institutions involved in the protection of bats (skills, practical knowledge, motivation).

- Involvement of the State Forests PL in the protection of bats - an institution managing natural resources in 1/3 of the country's area.
- Promote shelters built with bats in mind and habitat enrichment as excellent compensation tools and mitigation solutions.
- Bat-related investments should be adjusted to the problem, monitoring of bat boxes is often insufficient and not very durable.
- Stimulation of follow-up activities and the possibility of duplicating project activities.

Results of research conducted by TPN

The research was co-financed by the forest fund provided to the Tatra National Park by the State Forests.

The impact of large-area disturbances of stands on the bat fauna in the forests of the Tatra National Park
